Portugal in 1986

Hospitals and Technology

- Hospitals were less modern and less equipped
- Limited access to healthcare, especially in rural areas
- Basic medical technology
- No computers – all records were on paper
- Slow diagnosis and treatments

Comparison (1986 vs Today)

Main Differences

- Paper records → Digital records
- Basic equipment → Advanced technology
- Slow diagnosis → Fast diagnosis
- Limited access → Wider access to healthcare
- Lower quality care → Higher quality care

Infant Mortality

1986:

Around 15–20 deaths per 1,000
births

Today:

Around 2–3 deaths per 1,000
births

***Big improvement due to
better healthcare and
technology***

Births and Maternity

1986:

Less advanced maternity care

Today:

Almost all births in hospitals

***Fewer hospital births and
higher risks***

***Safer pregnancies with
modern technology***

Future of Healthcare

- Robots will help doctors
- Use of Artificial Intelligence
- More digital healthcare
- Personalized treatments
- Faster and more efficient care

Conclusion

- Healthcare in Portugal has improved greatly since 1986
- Hospitals are now more modern, efficient, and better equipped
- Technology allows faster and more accurate diagnosis and treatments
- Infant mortality has decreased significantly over the years
- People have better access to healthcare and live longer lives
- Future technologies like AI and robotics will continue to improve medicine
- Overall, technology has made healthcare safer, more advanced, and more accessible
