INTRODUCTION

In 1986, the country was still undergoing a profound transition. The road landscape was very different from today, with poor infrastructures.

1986

Until the 1970s, the only expressways were small stretches on the outskirts of Lisbon and Porto

Today

In 1972, Brisa was created to accelerate construction, but by 1974 the country only had about 66 km of highway.

LISBON TO PORTO

A curiosity:

Scarcity of Motorways: There were less than 200 km in the entire country (essentially the Lisbon-Vila Franca axis and parts of Porto).

WHAT WAS THE PAVEMENT LIKE?

Uneven pavement: The asphalt was rough and many secondary sections were still paved with cobblestones or macadam.

POOR SIGNAGE

The lighting was poor and the lane markings were often nonexistent.

HIGH ACCIDENT RATE

Portugal had one of the highest road fatality rates in Europe due to the state of its roads.

CARS IN 1986

In 1986, Portugal mainly had four types of cars: the Renault 4L, the Citroën 2HP, the Fiat 127, and the Datsun 1200, as shown in the images.

PUBLIC AND COLLECTIVE TRANSPORTATION

Without the highway network, trains and buses were vital, but slow.

Or those who didn't have access to public transport and lived in the countryside, used their animals, such as horses or donkeys.

PUBLIC AND COLLECTIVE TRANSPORTATION

Railways:

Diesel Trains: Electrification was very limited (only on the suburban lines of Lisbon and Porto).

Long Journeys: Going from Lisbon to Porto on the "Foguete" or "Rápido" trains took about 5 hours.

Active Stations: Many secondary lines (such as the Tua or Corgo lines) were still fully operational.

CONCLUSION

In 1986, a trip from Lisbon to the Algarve (via National Road 121 or 1) could take 6 to 8 hours, passing through all the towns and facing the curves of the Serra de Grândola or Caldeirão mountain ranges.
